

$$\frac{9}{10} - \frac{2}{9} =$$

$$1\frac{1}{5} + 11\frac{7}{9} =$$

$$4\frac{8}{9} + 1000\frac{4}{5} =$$

$$\frac{9}{10} + \frac{4}{9} =$$

$$9\frac{7}{8} + 1\frac{5}{8} =$$

$$3\frac{6}{7} + 8\frac{1}{6} =$$

$$1000\frac{3}{11} + 5\frac{1}{8} =$$

$$\frac{9}{10} - \frac{2}{9} = \frac{81}{90} - \frac{20}{90} = \frac{61}{90}$$

(Multiplication factors: x 9 for the first fraction, x 10 for the second)

$$1\frac{1}{5} + 11\frac{7}{9} = 1\frac{9}{45} + 11\frac{35}{45} = 12\frac{44}{45}$$

(Multiplication factors: x 9 for the first fraction, x 5 for the second)

$$4\frac{8}{9} + 1000\frac{4}{5} = 4\frac{40}{45} + 1000\frac{36}{45} = 1004\frac{76}{45} = 1005\frac{31}{45}$$

(Multiplication factors: x 5 for the first fraction, x 9 for the second)

$$\frac{9}{10} + \frac{4}{9} = \frac{81}{90} + \frac{40}{90} = \frac{121}{90} = 1\frac{31}{90}$$

(Multiplication factors: x 9 for the first fraction, x 10 for the second)

$$9\frac{7}{8} + 1\frac{5}{8} = 10\frac{12}{8} = 11\frac{4}{8} = 11\frac{1}{2}$$

$$3\frac{6}{7} + 8\frac{1}{6} = 3\frac{36}{42} + 8\frac{7}{42} = 11\frac{43}{42} = 12\frac{1}{42}$$

(Multiplication factors: x 6 for the first fraction, x 7 for the second)

$$1000\frac{3}{11} + 5\frac{1}{8} = 1000\frac{24}{88} + 5\frac{11}{88} = 1005\frac{35}{88}$$

(Multiplication factors: x 8 for the first fraction, x 11 for the second)
